

Software Testing Assignment

Module-1(Fundamental)

1. What is SDLC

Ans: Software development life cycle is series of steps/phases that provide model development required.

2. What is software testing?

Ans: Software testing is a process that used to identify correctness, completeness and quality of developed computer software.

3. What is agile methodology?

Ans: agile means delivery a working software in small parts with continues feedback and improvement.

4. What is SRS

Ans: SRS is software requirement specification a complete description of the behaviour of the system to be developed.

5. What is oops

Ans: OOPS means Object Oriented Programming System. A programming language that uses a concept of objects and classes to structure code around data.

6. Write Basic Concepts of oops

Ans:

- Class
- Object
- Inheritance
- Encapsulation
- Polymorphism
- Abstraction

7. What is object

Ans: object gives permission to access functionality of class.

8. What is class

Ans: it is collection of data

9. What is encapsulation

Ans: encapsulation is wrapping of data

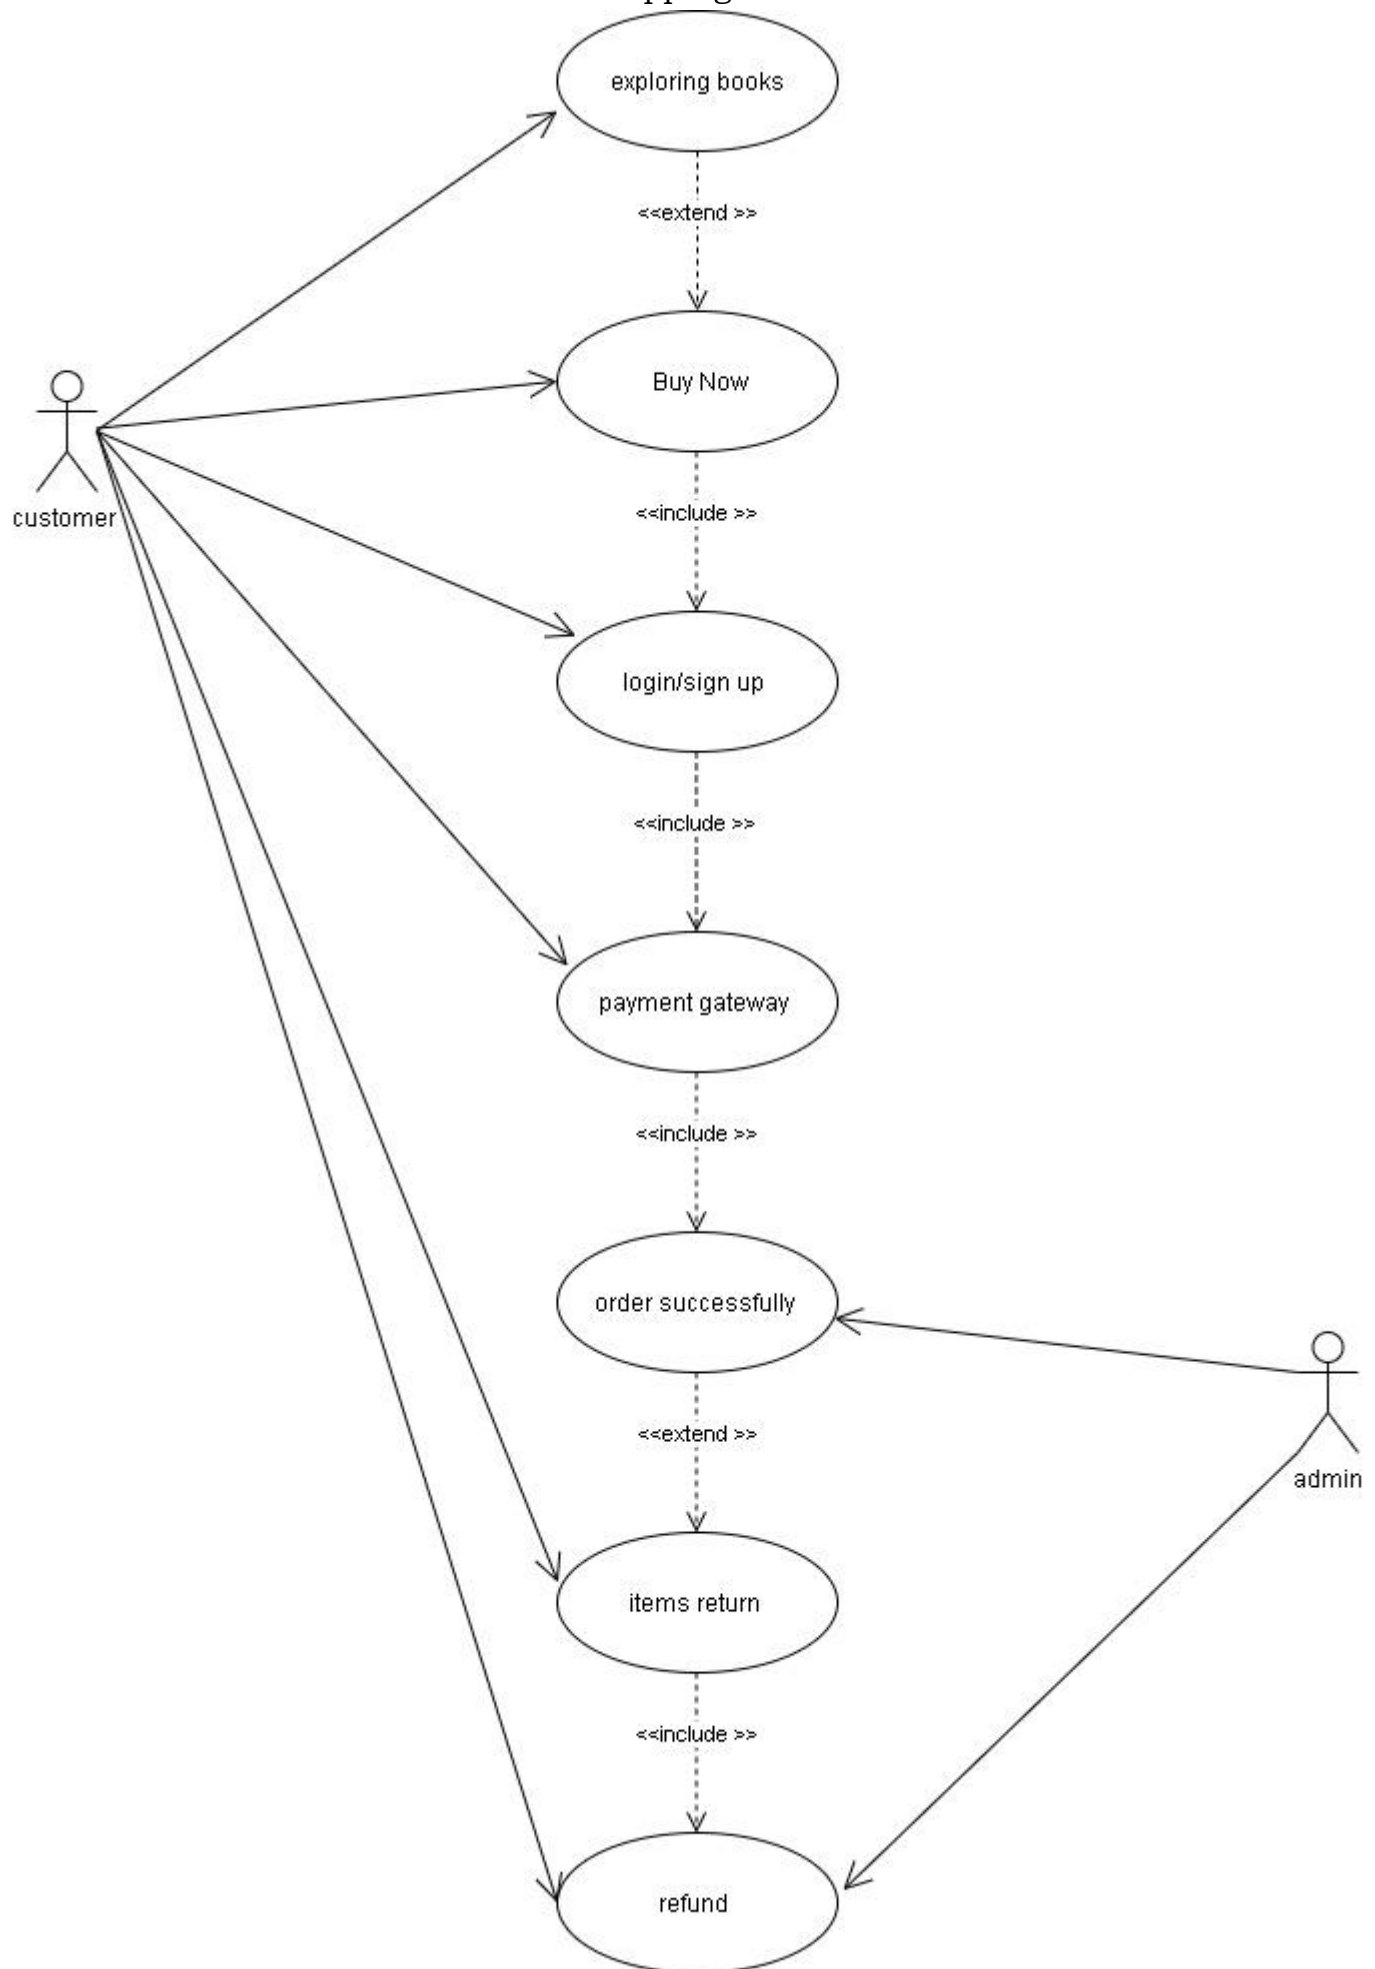

10. What is inheritance

Ans: to derive attribute of some other class

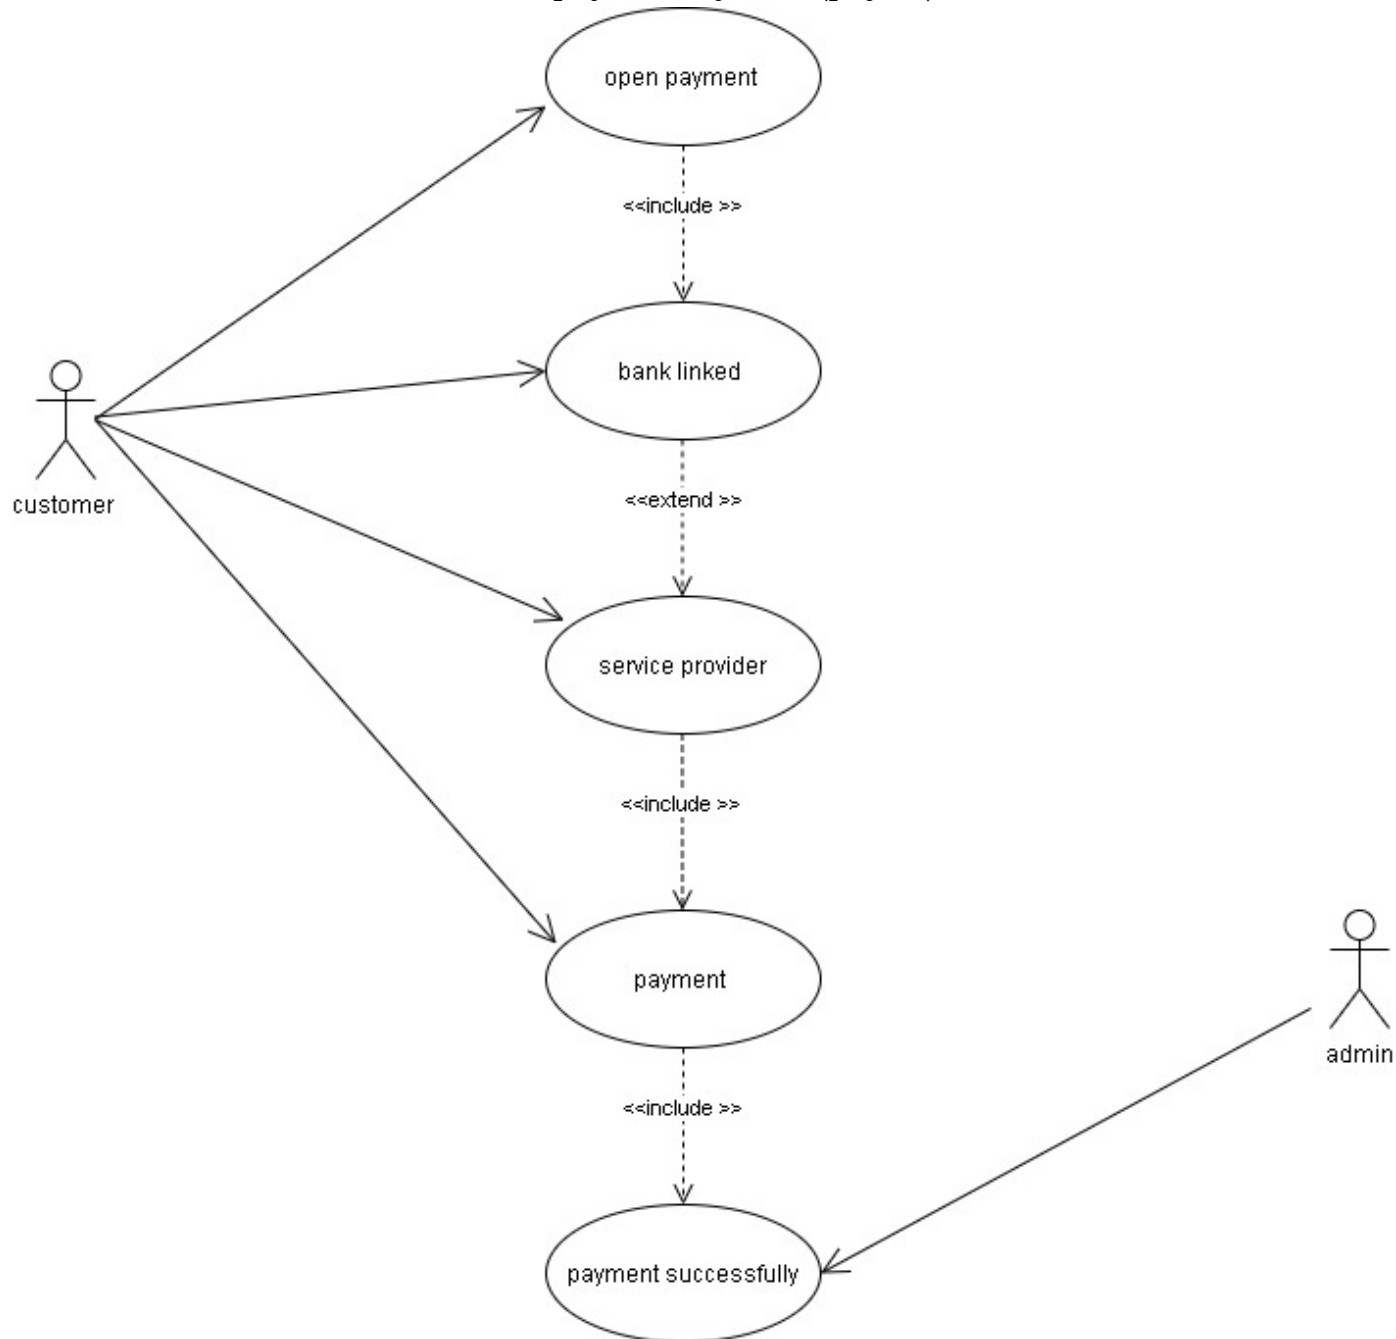

11. What is polymorphism

Ans: it is a one name and multiple form

12. Draw Usecase on Online book shopping

13. Draw Usecase on online bill payment system (paytm)

14 Write SDLC phases with basic introduction

Ans: Software Development Life Cycle means Series of steps/phases that provide model of development.

- Phases:
- Requirement Gathering and analysis,
- Designing,
- Implementation,
- Testing,
- Deployment,
- Maintenance.

15 Explain Phases of the waterfall model

Requirement collection: Collect details from client about the project

Analysis: To analyse the requirements and convert into SRS and CRS.

Design: to prepare design/UI as per the requirements.

Implementation: coding

Testing & deployment: To verify completeness, correctness and quality

Maintenance: To repair a defect.

16 Write phases of spiral model

- Planning
- Risk Analysis
- Customer Evolution
- Engineering

17 Explain working methodology of agile model and also write pros.

Iterative incremental model

Work divided by small parts

Need to complete work in specific time

Daily meeting

Continues improvement

Continues testing and feedback

Customers are involved in every phase

Fast and flexible delivery

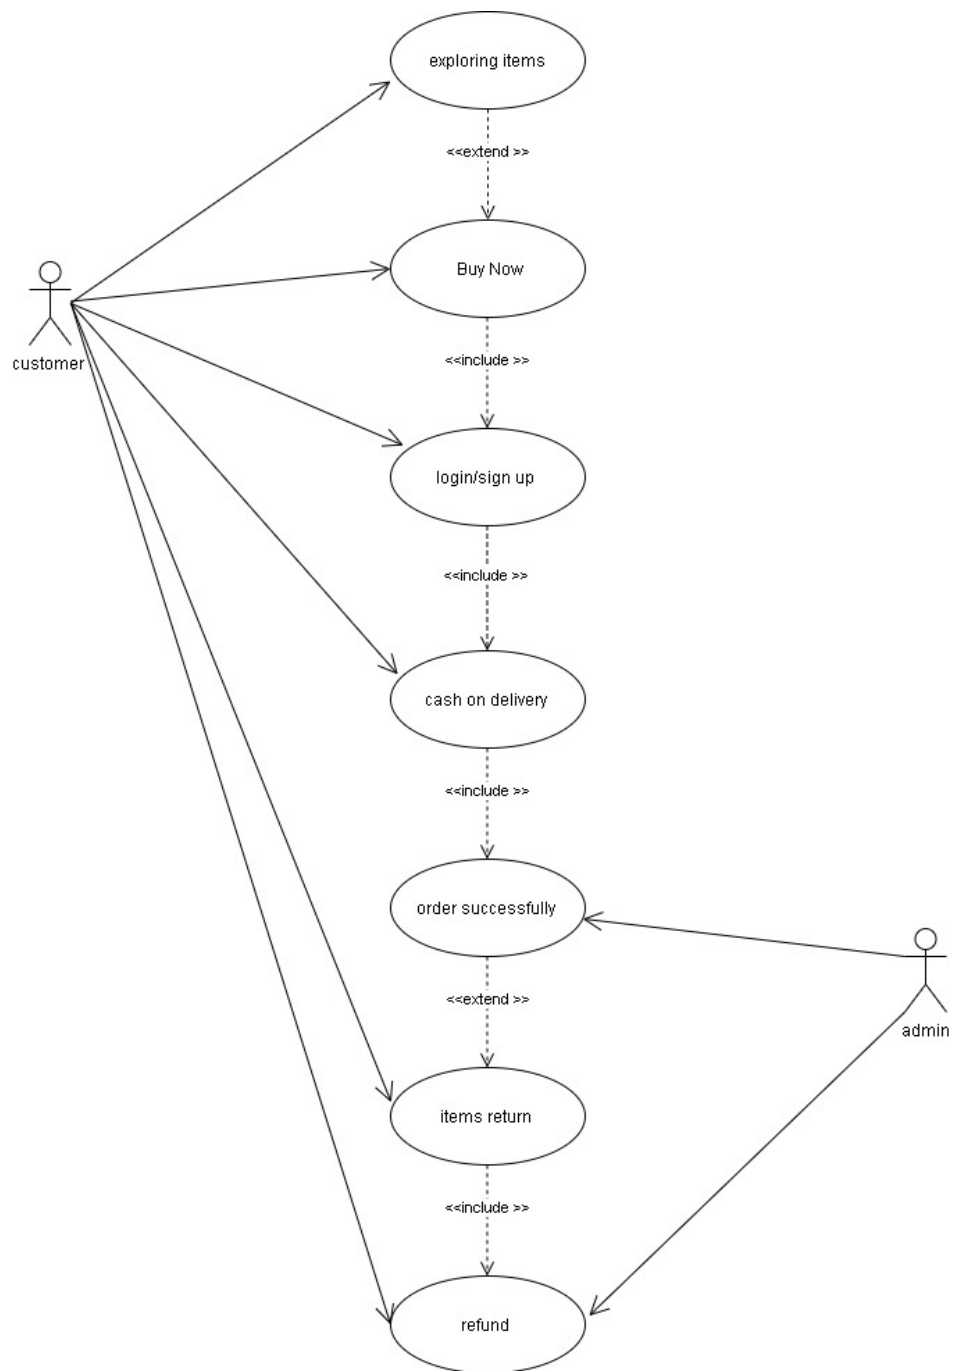

Pros :

Quick delivery

Easy to change requirement

Continues collaboration with customers

18 Draw usecase on Online shopping product using COD.

19 Draw usecase on Online shopping product using payment gateway.
